Laminated Films for Glass

New in the Mood representation: Viewcol films for producing images on glass. With Viewcol films you can laminate any high resolution image or text material in file form between two glass surfaces. The image imprint is extremely sharp, colours deep and brilliant and colour glides soft.

- Free images on Viewcol films
- Laminating and safety glass feature with Evasafe films
- The amount of glass to be used is determined freely according to the project
- It is also possible to embed LED light fittings

Viewcol film is a 0.125 mm thick transparent PET polyester foil. The end colours are transparent, so that light shines through the glass and transparency is not restricted (light penetration >99%). If required, the surface transparency can be changed by adding frost films (light penetration <78%) or cover films (light penetration <7%). The film is 1580mm wide.

It is recommended that Viewcol image film is laminated between two Bridgestone Evasafe foil layers. Evasafe foil is an EVA (Ethylene Vinyl Acetate) based material between layers for strengthening laminated safety glass. It has excellent adhesive and durability attributes. The laminated pieces of glass become damp-proof, so they can also be installed frameless to humid and outdoor spaces. The ensemble can be also be installed to projects with high temperature.

Evasafe films can be use to increase sound-proofing and for making UV filter glass. Evasafe films have been tested and certified for both indoor and outdoor use. Viewcol and Evasafe films can be laminated in a process either with or without an autoclave.

The images can be from the Mood Images collection, designed by the Mood design services, or client's own images. There are also options for material copies, in addition to the images and texts. The colour system is RGB.

Setting the Mood

Mood is a project house for interior and architectural projects, which develops and makes use of the latest techniques and product applications in digital image transfers for implementing different image and effect elements. Mood concepts include Mood Acoustic element (acoustic wall solutions, partitions), Mood Led Light Box with textile surface and Mood Lamps - lamps with printed shades. The latest addition is Mood Glass, suitable even for facade construction. Mood range also includes complete image collections as well as the customised project-specific design service.

Mood operates in partnership with the leading, most innovative suppliers in Europe. We would be pleased to provide more information about Mood image concepts and services. More information and image collections can be found in www.mood.fi.
